WORKSHOP

TIME, UNCERTAINTIES & STRATEGIES X (TUS X)

06 décembre 2024 - 17 décembre 2024

The idea that underlies the «Time, Uncertainties and Strategies» conferences is to mix the productions of some brilliant scholars having completed some recent axiomatic work on alternative approaches to choice over time and under uncertainty, stochastic choice, some recent related revealed preference / comparative statics approaches or some advances related to the understanding of strategic uncertainty. It is also interested in recent works that have examined the implications of their integration of these issues into general equilibrium frameworks or payed attention to the involved optimization techniques.
